

HTMLCOIN Wallet Quick Guide

Downloading

You can download the HTMLCOIN wallet version v2.0.0.1

Wallets: <https://github.com/HTMLCOIN/HTMLCOIN/releases>

Installing

- Open the downloaded .exe file
- When you first install the wallet you will be prompted by the Windows firewall to give the program permission. Simply hit *Allow access*
- Your wallet will now begin to synchronise with the network
- When your wallet has completed synchronising with the network you will see the following symbol:

Encrypting your wallet

- Go to Settings
- Click on Encrypt wallet
- Put in a strong passphrase that you can remember

Making a back-up

- Go to file
- Click on Backup Wallet
- Save the file with the extension .dat

Restoring a back-up (Windows)

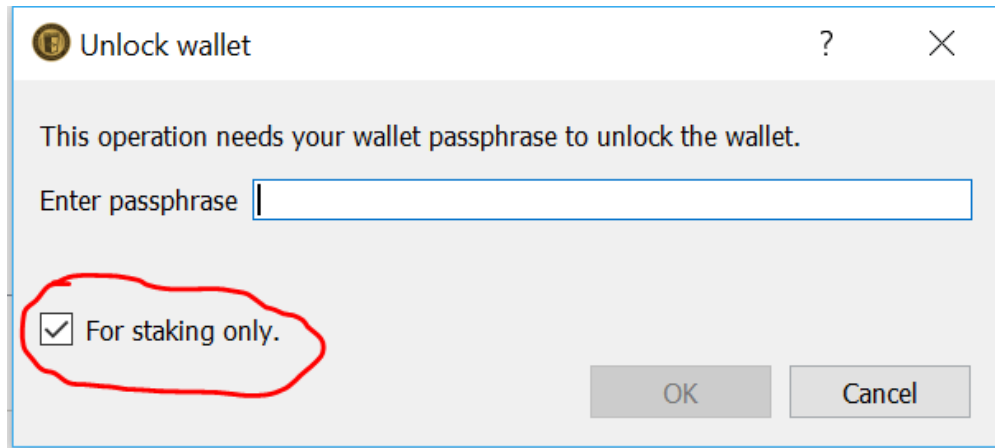

- Close your wallet
- Search for the folder: %APPDATA%
- Remove the wallet.dat file in the folder HTMLCOIN
- Put your back up .dat file in the folder and name it wallet.dat
- Open your wallet
- NEVER DELETE THE WALLET.DAT FILE

Restoring a back-up (Mac)

- Close your wallet
- Search for the folder: ~/Library/Application Support/HTMLCOIN/
- Remove the wallet.dat file in the folder
- Put your back up .dat file in the folder and name it wallet.dat
- Open your wallet
- NEVER DELETE THE WALLET.DAT FILE

Staking

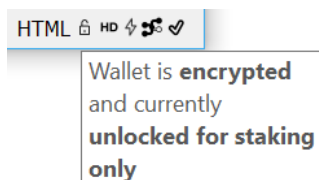

- Open your wallet
- Go to Settings
- Click on Unlock wallet

- Fill in your passphrase
- Click the box "For staking only" and press OK

To check if your wallet is staking correctly:

- First check if your wallet is encrypted and currently unlocked by moving your mouse on to the lock symbol, it should look like this:

- Second check if your wallet is staking by moving your mouse on to the lightning bolt: Staking
- And last check your active connections, by moving your mouse on to the third symbol
